Coptic architecture is the architecture of the Copts, who form the majority of Christians in Egypt. Coptic churches range from great cathedrals such as Saint Mark's Coptic Orthodox Cathedral to the smallest churches in rural villages. Many ancient monasteries like Monastery of Saint Anthony also exist. Ancient churches like the Hanging Church in Coptic Cairo carry important historical value to the Coptic Orthodox Church and the Copts in general. In 16th century England most of the population lived in small villages and made their living from farming. However towns grew larger and more important. During the 16th century trade and industry grew rapidly and England became a more and more commercial country. In the 16th century jobs were not always easy to find. In Tudor Times there were thousands of people without jobs wandering around looking for work. There were also disabled beggars.
